What is Powder Coating?

Powder Coating is a superior alternative to liquid paint finishes. Powder coating provides a decorative and very durable finish. The process of Powder Coating involves a curing oven that is used to melt and bake on the dry powder particles that are sprayed on. The baked on finish is where the extreme durability is achieved - a solid, uniform, seamless coating that will last for years.

About Us

Performance Powder Coating is a locally owned business that has a reputation of getting the job done right. We want you to come and experience our award winning service that the Niagara Region is buzzing about.

Our Mission

Performance Powder Coating's mission is to introduce powder coating to the entire region and to uphold a first class customer service reputation. We would be enthused to introduce you to all the aspects of our services. We look forward to meeting you and to fulfilling your powder coating needs.
